Amendments to the Claims:

1 - 7 - Cancelled

8. (Previously Presented) A composite structural member comprising, in a sandwich configuration, a core adhesively bonded on opposite lateral surfaces thereof to structural skin layers that may be the same or different, said core comprising an extruded, closed-cell polymer foam layer made from a polymer selected from the group consisting of polypropylene homopolymer, copolymers of polypropylene and other monomers wherein the polypropylene is at least about 80% by weight of the copolymer, and blends of polypropylene and one or more different polyolefins wherein the polypropylene is present in an amount of at least about 80% by weight of the blend, and wherein said polypropylene foam has a density of from about 3 to 8 pcf and a shear strength of from 60 to 200 psi, and wherein each said opposite lateral surface of said core is skived to provide a layer of open cells for adhesive bonding to said skin layers.

9. (Currently Amended) The composite structural member of Claim [[1]] 8 wherein said polypropylene foam has a density of from about 4 to 5 pcf.

10. (Currently Amended) A marine craft comprising composite structural members as recited in Claim [[1]] 8.

11. Cancelled

12. (Currently Amended) The composite structural member of Claim [[11]] 8 wherein said skin layers and said core are adhesively bonded by a thermoplastic or thermosetting resin.

13. (Currently Amended) The composite structural member of Claim [[11]] 8 wherein said fiber-reinforced plastic has a matrix of a thermoplastic or thermosetting resin.

14 - 15 (Cancelled)

16. (Currently Amended) The composite structural member of Claim [[1]] 8 wherein said core and said structural skins are adhesively bonded by application of heat to either the skin

Appl. No.: 09/776,576

or the core or both sufficient to bond the skin to the core in the absence of a separate adhesive layer.

17. (Currently Amended) The composite structure member of Claim ~~[[1]]~~ 8 wherein said core and said structural skins are adhesively bonded by molding directly to fiber reinforced plastic in an uncured state and then curing the fiber reinforced plastic.

18. (Currently Amended) The composite structural member of Claim ~~[[4]]~~ 21 in the absence of a separate adhesive layer between said structural skin and said core.

19. (New) The composite structural member of Claim 8 wherein said structural skin layers are selected from the group consisting of aluminum, steel, titanium, plywood, high-pressure laminates, and reinforced plastics.

20. (New) The composite structural member of Claim 8 wherein said core is cut through most of its thickness from a lateral surface to form a hinge at the opposite lateral surface about which said core can be bent.

21. (New) The composite structural member of Claim 8 wherein said structural skin layers comprise fiber-reinforced plastic.

22. (New) The composite structural member of Claim 8 wherein said core and said structural skins are adhesively bonded by a thermoplastic adhesive or thermosetting adhesive applied between said core and said structural skin layer.

23. (New) The composite structural member of Claim 8 wherein said core is from about 1/4 to 2-1/2 inches thick.

24. (New) The composite structural member of Claim 8 wherein each said skin layer is less than about 1/4 of an inch thick.
